A Safer, Water-Based, Wood Floor Program

Some Floors are Just Luckier than Others®

A proven maintenance system will enhance a floor's natural beauty and protect your substantial investment. When choosing a wood floor system, consider the Swish Wood Floor Care Program. Since most wood floors can be brought back to "like-new condition" with a simple deep scrub and recoat process, the Swish water based wood floor system is safer during application and offers a cost effective solution to traditional wood floor systems.

Why is hand washing important?

A typical person's hand can carry many millions of bacteria, some of which are naturally found on our bodies (the human microbiome) and some of which are pathogens (otherwise known as "germs"). Also, some bacteria or viruses may be harmless to one person but can cause illness in others.

Odor Control Basics: Why it smells and how we deal with it

Tens of millions of receptors in the nose are each connected to the brain by nerves. When an odor molecule contacts the right receptor, an impulse is sent to the brain which identifies the odor as something which may be pleasant or objectionable.

By adding a stronger, more pleasant fragrance, one can mask the odor and reodorize the space. While this is fine in circumstances where bad odors are temporary, like in your home or small offices, it has limitations in more permanent applications.

Odor counteractants on the other hand, have the effect of matching the bad

odor molecule with another "counteracting" molecule which physically changes and neutralizes the actual bad odor molecule thereby effectively eliminating the message which the nose was sending to the brain.

The better odor counteractants on the market today recognize that a simple neutral fragrance can be perceived as stale air. For this reason, product lines offered by Swish® and Enviro-Solutions® enhance the quality of their products by adding molecules which stimulate the receptors of the nose giving on the faint perception of outdoor freshness.
